

ASN Manager for Microsoft Dynamics® GP

vSync ASN Manager is your turnkey solution for meeting the needs of your trading partner's ASN requirements.

The ASN (Advanced Ship Notice/856) is the EDI document trading partners require to notify them of shipments being sent from vendors. Trading partners have different ASN requirements which can make it difficult for companies to comply. The penalties for non-compliance can result in charge-backs that add another layer of pain to the process.

FEATURES

- Easily generates ASNs and prints UCC-128 labels in one system
- Print and reprint UCC-128 labels by shipment, order, carton or pallet directly from Microsoft Dynamics GP
- Performs data validation and produces audit reports on incoming orders and outgoing ASN documents
- Populates ASN documents with line item data directly from the Microsoft Dynamics GP invoice or purchase/sales order
- Manually select orders for ASN processing or automate the process for zero-touch ASN generation and transmission
- Stores trading partner-specific data in reference tables by customer, item, ship-to, ship-via and more
- Supports multi-user environments
- Supports Microsoft Dynamics GP security options including modifier components and business rules

EMBEDDED WITHIN MICROSOFT DYNAMICS GP FOR TIGHTEST INTEGRATION

vSync's ASN Manager is fully embedded into Microsoft Dynamics GP to make use of the Microsoft Dynamics GP architecture. This deep level of integration "ties" together critical information at a level you can't get from other products that claim to be integrated.

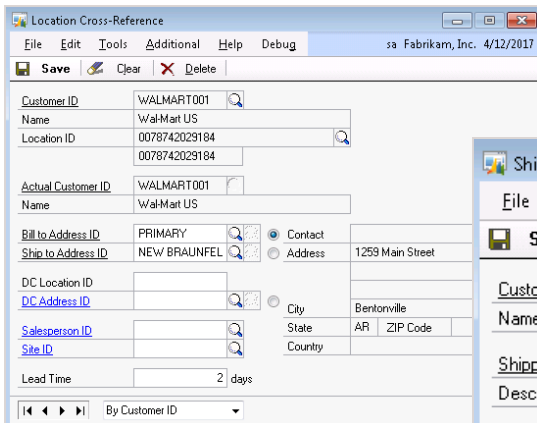

THE PROCESS

Set up trading partners in a series of cross reference tables that will store compliance requirements such as case packs, inner packs, box details, shipping weights, etc. As you receive orders in Microsoft Dynamics GP, vSync produces a validation report so you can take appropriate action *before* the order hits the warehouse. You can choose to generate ASNs by invoice, order or both. Select the order or invoice you wish to combine into a shipment and ASN Manager will assign serial shipping container codes for each shipment. In addition, the system will populate all other trading partner-specific ASN information from the cross reference tables to produce and send the ASN. Complete the process by printing trading partner-specific UCC-128 labels for boxes, cartons and pallets. vSync ASN Manager also gives you the ability to automate this entire process which will generate and send compliant ASNs as orders are received.

ONE SYSTEM FOR ASN PROCESSING

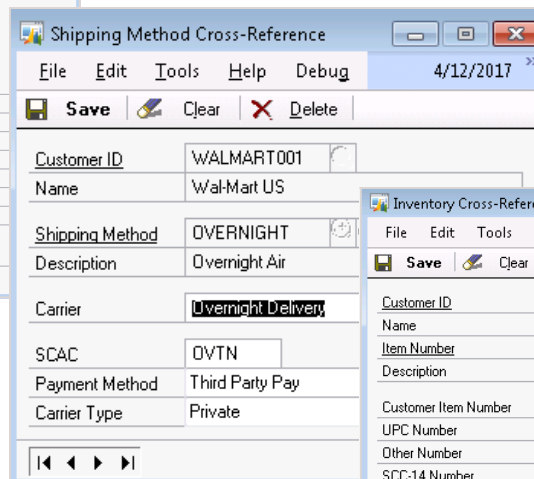

With vSync ASN Manager, you use one system—from order receipt to label printing—to complete ASN processing. This tight integration means limited manual entry of data which reduces errors, reduces charge-backs and saves time. ASN Manager supports multi-users so you can deploy your staff as you see fit. ASN Manager also takes full advantage of the Microsoft Dynamics GP security features, modifier components and rules within Microsoft Dynamics GP so you can secure your system as needed.

Reduce charge-backs using cross reference tables that enable storage of critical compliance data by customer, item, ship-to, distribution center, ship-via, tax and terms codes.

Automate fulfillment, receipt and distribution processes by creating electronic ship notices and UCC-128 bar code labels.

Built Specifically for Microsoft Dynamics GP

OVER 600 ASN TRADING PARTNER KITS AVAILABLE

Adding new trading partners is a snap with vSync. We offer trading partner kits which contain the document templates that your trading partner has adopted. Trading partner kits streamline the testing and implementation process so you can quickly begin processing trading partner compliant ASNs.

Automate fulfillment, receipt and distribution processes by creating electronic ship notices and UCC-128 bar code labels.

SUPPORTS YOUR WORKFLOW

- Supports both standard and pick/pack environments
- Configurable automatic archiving of ASN data
- Generate ASNs by order or group orders together using a variety of options (date, range, ship-to address, item, warehouse, etc.)
- Automatically assigns serial shipping container codes by carton and pallet and populates ASN with trading partner-specific data
- Supports all distribution environments with tracking by store, ship to warehouse mark for store, split shipments, and multiple orders to a single ASN
- Supports unit of measure conversion by customer and by item
- Supports staged orders, enabling order selection or grouping and label printing with ASN generation on demand.
