

## *Pulse & EDI for GP Adaptor*

# Accellos Pulse

### **The Heartbeat of Your Business**

It is a well known fact that if you're not measuring the results of your enterprise, it is difficult to assess effectiveness and seek operational improvements. Yet many companies, due to the historic high cost of deploying business intelligence solutions, have chosen to continue utilizing hard copy reports that are printed, set aside and rarely are effective.

### **Accellos One Pulse: Real-time analytics and executive dashboards**

The cost of data storage has diminished significantly over the last decade. This in turn has created a sea of data that can overwhelm companies as they attempt to deliver the right information to key stakeholders so they are equipped to make intelligent decisions when managing their business. Accellos One Pulse is a supply chain intelligence tool that enables forward-looking analytics, spanning across multiple locations, business units, and functions to create an enterprise-level view. Pulse provides immediate insight into the key performance indicators that drive critical decisions in your business every day. Pulse delivers a rich presentation layer, including charts, graphs, data grids, gauges and reports, that are extensible based on the key performance metrics defined by your business.

Pulse now includes an EDI adaptor with preconfigured KPIs and reports that enables your organization to proactively manage your EDI operations throughout the order to cash lifecycle. Pulse glues together disparate sources of data to identify opportunities and problem areas, process variations and true exceptions. The individual KPI's are role-specific views, tailored to the information needs of individual functional areas such as AR, Customer Service, Fulfillment, and EDI Administration.

"Perhaps the most important features that a business intelligence solution can provide for a small to medium business are the ability to manage and reduce the complexity of their analytical environment and to do so at as low of a cost as possible." -Aberdeen Group

## Accellos Pulse FEATURES:

Measure your key performance indicators...

### Supply Chain Intelligence

Monitor and analyze critical transactional data from your key supply chain partners so your organization can proactively respond to issues before they become costly to your business and disruptive to your business relationships with your key supply chain partners.

### Real-Time Analytics & Visibility

Gain visibility of the real-time status of transactions exchanged with your key partners as they progress throughout the order lifecycle. Identify problem areas through monitoring and exception alerting to mitigate costly chargebacks, missed ship dates, and non-compliance fees.

### Configurable Dashboards

Leverage extensive dashboards to deliver actionable information to the right people in the format they can consume to help individual decision makers identify problem areas, trends, and revenue opportunities. Role based views enable personnel from different functional areas to gain visibility into those metrics that make sense for the role they play, whether they are technical or not.

### Rich Presentation Layer

Display critical data using the most effective presentation method including charts, graphs, grids, and gauges.

### Extensible to multiple business applications

Accellos one Pulse can be utilized for other business applications beyond EDI. Accellos also offers business adaptors and KPIs to other Accellos Supply Chain applications including A1 Collect, A1 WMS, and A1 Transport.
