

*Remote Warehouse EDI  
for Microsoft Dynamics® GP*

vSync Remote Warehouse is an ideal solution for companies that transfer a high volume of orders manually to one or more EDI-capable public or remote warehouses. Reduce order cycle times, improve access to distribution information and eliminate manual entries by sending your sales orders electronically to one or more warehouses.

When a company manually faxes and emails orders to the warehouse, chances are the warehouse is manually typing the orders into their warehouse management system.

Manual entry for both parties adds time to order processing, extends shipping turnaround and can lead to errors – costing companies charge-backs and low productivity.

vSync Remote Warehouse electronically transfers sales order data via the EDI Pick Ticket directly from Microsoft Dynamics GP to the warehouse and enables you to receive the EDI Shipment Advice which can be used to update the sales order. Populating the sales order with shipment data (i.e. quantity fulfilled, tracking numbers, freight costs) gives your customer service employees quick access to customer order information to better support inquiries.

vSync Remote Warehouse is also capable of extending the EDI workflows with the warehouse to include other EDI documents that can be beneficial in helping companies synchronize inventory, process warehouse transfers, and manage inventory balances.

## MEET COMPLIANCE MANDATES AND MANAGE YOUR DISTRIBUTION ENVIRONMENT EASILY

### Streamlines Order Processing

- Eliminates manual communication with warehouses
- Sends electronic pick tickets
- Eliminates manual entry at warehouse
- Send invoices sooner to improve cash flow

### Reduces Charge-backs

- Meet compliant cycle times
- Send orders to the warehouse faster
- Eliminates manual entry of orders to reduce errors

### Provides Timely Data for Customer Service

- Shipping information populates the sales order automatically
- Customer Service staff gain access to shipping information associated with their order

### Better Inventory Management

- Maintain accurate inventory levels through inventory synchronization
- Reduce out of stock orders
- Enables electronic synchronization of your inventory records with the warehouse inventory records
- Efficient process communicates inventory adjustments at the warehouse

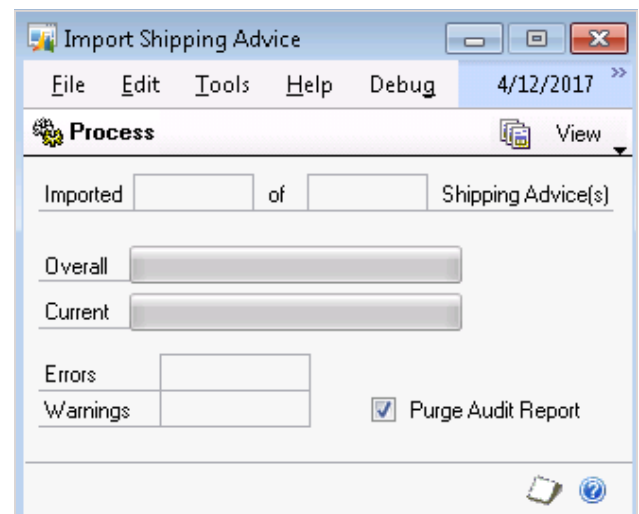

### Better Management of Distribution Environment

- Stores warehouse-specific order/shipping data
- Provides insight into warehouse inventory
- Easily process warehouse transfers and shipments

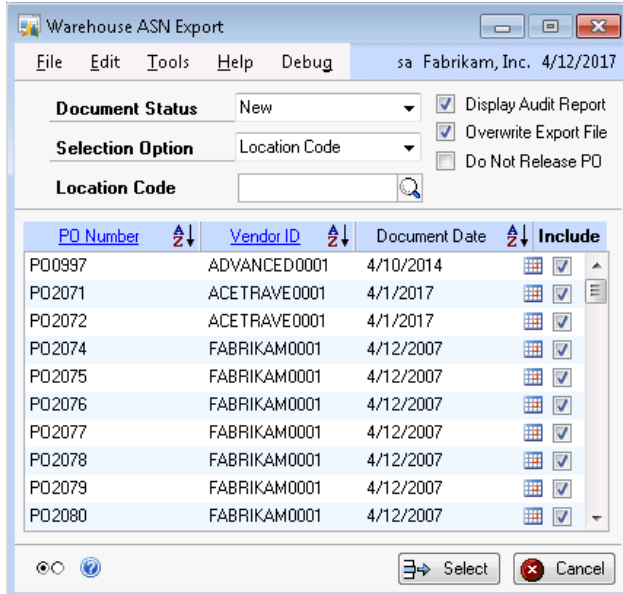

## UPDATE SALES ORDERS WITH FULFILLMENT DATA

vSync Remote Warehouse also enables the import of the shipping advise to update Microsoft Dynamics GP sales orders with data such as quantity fulfilled, update batch IDs, freight amounts, carriers used and tracking numbers. The system supports backorder scenarios with configurable settings for creating a new order or cancelling an order. The system will also apply ship dates and assign Serial, Lot, and/or Bin tracking details.

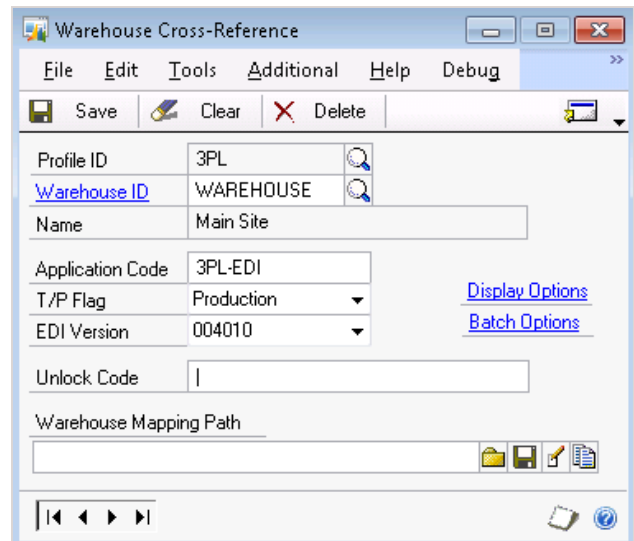

## GENERATE NOTIFICATIONS FOR YOUR WAREHOUSES

vSync's Remote Warehouse enables ASNs (Advance Ship Notices) to be sent to the warehouse advising it of inbound vendor shipments.

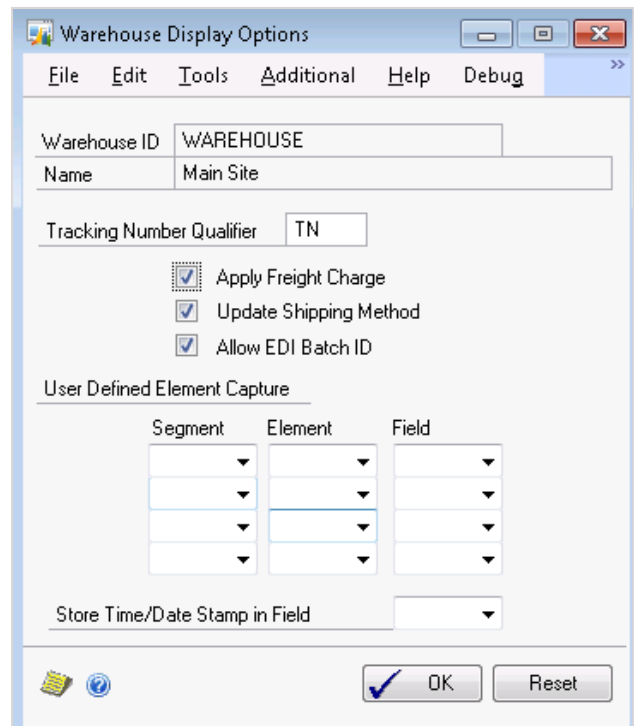

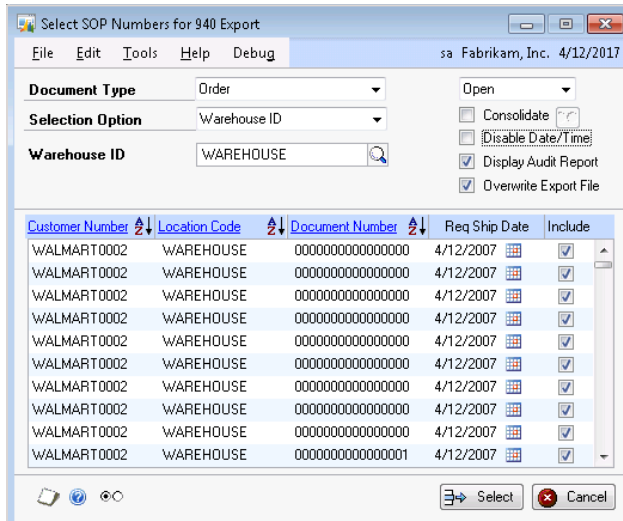

## SET UP OPTIONS BY WAREHOUSE

vSync's Remote Warehouse includes cross reference windows embedded within Microsoft Dynamics GP to store warehouse specific information. Setup options confirm which warehouses are EDI capable, what documents they process, which records/fields are used and associated processing rules.

## ORDER SELECTION

Flexible automation features enable you to send pick tickets to your warehouse by ship dates, customer IDs and more.

# Built Specifically for Microsoft Dynamics GP

Implementing EDI with your public warehouse can result in better pricing, improved efficiency and streamlined order processing
